

Mundus MESC+

Your contact: Jamila TAMIMY - jamila.tamimy@u-picardie.fr

Students with a Bachelor's degree can join the UPJV via a scientific academic course of excellence in the field of energy: the Erasmus Mundus International Master's programme "Materials for energy storage and conversion" (MESC+). This two-year Master's programme, which has been awarded the European Union label, is taught entirely in English.

The MESC+ brings together students from different continents. The course includes several periods of mobility in Europe and outside Europe. A B2+ level in English is required.

Several partners are involved in the MESC+ :

- 5 European universities (France, Poland, Slovenia and Spain)
- 1 US university
- 1 university in Australia
- 1 European research institute (ALISTORE)
- the French network on energy storage (RS2E)
- the Slovenian National Institute of Chemistry (NIC)
- 1 research centre in Spain (CIC Energigune)

MESC+ is led by members of several world-class research laboratories in the field of energy-related materials. They are all working closely together in several European and trans-European projects.
